

Together, we can.

Make no compromises when the information is a matter of life and death.

Labelling blood bags is one of the most sensitive applications, and such labels therefore have to meet a number of exacting requirements, regardless of whether the blood bags are PVC or PVC-free.

Blood bags are labelled in two different ways. First they are labelled directly by the manufacturer; second they can also be provided with an additional label on top of the existing one in order to incorporate such personalised information as blood group, patient etc.

In both cases, the labels have to tolerate a number of exceptional climatic conditions. For instance, shock freezing in liquid nitrogen has to pose as little of a problem for the label as a storage temperature of -80°C or a thawing of the labelled blood bag in a 30°C warm water bath.

Furthermore, all blood bag labelling stocks have to have the approval of the independent ISEGA Institute for use on blood bags.

For these highly delicate areas of application, Avery Dennison manufactures Fasson labelling stocks for PVC and PVC-free blood bags, both for direct manufacturer labelling and subsequent secondary labelling. The Fasson adhesives used by Avery Dennison for labelling blood bags conform to the ISEGA rules for the period stipulated in the data sheets for them.

Caution! The use of labels for blood bags is subject to the strictest of criteria. Therefore, please request our terms of guarantee for blood bag labelling stock prior to placing your order.

THE ADVANTAGES OF USING FASSON BLOOD BAG LABELLING MATERIAL

- Labelling stocks may be shock-frozen in liquid nitrogen
- May be stored at temperatures down to -80°C
- Labelling stocks may be used for blood bags thawed out for 10 minutes in water 30°C warm
- Labelling stocks available for both PVC and PVC-free blood bags
